XX Project Title (Arial 130pt)

Team Members: A, B, C, D, E, F

HEADER (Arial 60 pt)

Change Log: Initial version 250312. No sponsor logos yet.

This is Body Text (Arial 36 pt). Try not to make your text too small and unreadable, especially your captions and in figure text.

This template is for you to start with. You do not have to use it, but please try to include the sponsors of the event at the bottom or top of your poster. It pays for the event and the catering.

This is the permalink to this live template https://soc-n.us/cp4285-t2610-steps-poster. You can copy the template to your own Google account for modification.

We suggest that you look at other STePS posters from prior groups from the previous iterations in T2520 (28th STePS; for example the previous CS4248 Natural Language Processing class, which uses a similar template).

You may find it helpful to look up research poster design strategies. Remember, Min will be visiting only for a short while (approximately 5-10 minutes) to engage you and ask some questions about your work. Be prepared to present and field questions.

Where possible, your grading staff will try to let you know when during STePS they are going to visit your poster, so that you can arrange your presentation duties as appropriate.

Your poster should have sections devoted to most / all components highlighted in the *Project Design Critique Update.*

For the avoidance of doubt, STePS teams only need to submit a .PDF of this poster as a proxy for their report in Canvas Files.
No 8-page report is required (it will be ignored).

Teams who feel that they could better answer questions posed to them during the oral presentation may submit a single page A4-sized .PDF file, alongside any elaborated answers as part of their submission (such as their code base; in such cases, you will need to submit an actual .zip file (not a URL to one) that has both pieces of information).
